MAJ, J.

The influence of physical and chemical factors on the hypotensive action of Vinca minor. J. Maj [Med. Acad., Krakow]. *Farm. Polska* 12, 85-7(1956).—The hypotensive actions of the aqueous extracts of *Vinca minor* was tested on cats in doses of 0.05, 0.1, and 0.2 g./kg., calculated on the base of the wt. of the dry matter. It was found that an acid ext. (AcOH, pH 3) showed the best action as well in the readings after 15 min. and after 1 hr., the neutral ext. was second best, and the alkaline ext. (NaOH, pH 10) had the weakest action. Using H_2O of 100° in the extn. does not impede the hypotensive action; the ext. may be dried completely and then be taken up again in H_2O; under these conditions the first noticeable hypotensive action will be found after injection of 0.005 g. dried ext./kg. of live animal.

HAS, J.

The pharmacological properties of Veratrum lobelianum. J. Mal (Med. Acad., Krakow). *Polska Akad. Umiejetności, Prace Komisji Nauk Farm., Dissertationes Pharm.* 4, 221-55 (1952). The alkaloids (0.69-0.74%) obtained from the roots of *Veratrum lobelianum* were very toxic (LD$_{50}$ for mice was 100 mg./kg. injected subcutaneously and 60 mg./kg. intraperitoneally, for frogs 60 mg./kg.). The toxic symptoms were due to the stimulation of kinetic corticular and subcorticular centers of the central nervous system and of the parasympathetic system. Applied parenterally it caused salivation, diarrhea, and a rapid drop in body temp. There was a transitory decrease in blood pressure and systolic frequency, a slight enlargement of cardiac vol., and dilatation of blood vessels. The vascular muscles were constricted. There was a slowing and deepening of respiration and frequent injections led to tachyphylaxis. 48 references.

TITLE : Study on the Field Increase of Wood Sulfate Cellulose for the Manufacture of Paper

SOURCE : Przegl. papiern., 1958, 14, No 2, 33-34

ABSTRACT : Investigated were the effects of maximum temperature (of 140, 145 and 150°) and of time at a maximum temperature on the overall yield of cellulose (C) and on the yield of sorted C. A C with Kyerkmann's number in the limits of 80, 70, 50, digested at 140 and 150°, was bleached followed by the determination of its yield, color and strength. It was found that the bleached strong C had considerably better fillability and better static properties, but

of resins on metal surfaces is decreased at low pH and by the addition of $Al_2(SO_4)_3$. Calcium ions and high pH values increase the formation of resin deposits on metal surfaces. The addition of $Al_2(SO_4)_3$ is more effective in controlling resin difficulties than a lowering of the pH of the pulp by the addition of HCl. -- From a summary by the authors.

I. Douglas fir—a fibrous raw material for pulp. Krystyna Baczyńska and Janusz Maj. *Przegląd Papierniczy* 12, 377–8(1956).—Investigation of Douglas fir (I) grown in northern Poland showed that the cellulose content was somewhat lower than in spruce (II) but about the same as in pine (III). Sulfite cooks of I with lignors contg. 6–6% total SO_2 gave poor-quality pulps of low strength and contg. large amts. of screenings. Kraft cooks of I gave satisfactory pulps but required a little more drastic pulping conditions than II or III.

1347. LYMPHOGRANULOMA VENEREUM (Russian text) - Maisyuk A. P. - ARKH. PATOL. 1958, 20/6 (58-67) Illus. 6

Three fatal cases were observed in men aged from 30 to 50 yr. Microabscesses in the centre of the affected lymph nodes and necroses along the lymph vessels are characteristic for inguinal lymphogranuloma. The dystrophic processes which lead to necroses are called 'gumınas'; finally numerous fistulae develop. In chronic cases, hyalinosis with marked connective tissue formation and sclerosis of the capsule may develop. Epithelioid tissue develops around the nerves; this can also be observed in the skin and may lead to differential diagnostic difficulties (tuberculosis, Hodgkin's disease and brucellosis) Brandt - Berlin (V, 13)

Abs Jour : Ref Zhur - Biologiya, No 16, 25 Aug 1957, 69408

Author : Maisuradze, N.I.
Inst :
Title : Citrus Cultivation in Italy.

Orig Pub : Nauka i peredov. opit v. s. kh. 1956, No 8, 87-88

Abst : Sicily produces 71.4% of all citrus fruits and 91.5% of all lemons grown in Italy. The cultivation of lemons during the past 25 years has fallen 38% because they were stricken by malsecco disease. In this article there are statements about the districting of citrus growth in Sicily, climatic conditions, protection of citrus plants from winds, and agrotechnique. The most widely distributed types of lemons in Sicily are enumerated.

TITLE : Dermatites in the Chemico-Pharmaceutical Industry

ORIG. PUB. : Dermato-venerol., 1958, 3, No 4, 313-319

ABSTRACT : Described are cases of professional dermatites (PD) among workers as the result of contacts with hypochlorites, dinitro chlorobenzene, CCl_4, hexyl resorcinol, benzidine, and enzymes of pancreas gland. The most common skin deseases were the dermaconioses, skin erosions, eczema. Only in 2% of cases PD was accompanied by the temporary incapacitation. Bibliography includes 6 titles.
